Do not store, or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

**WHAT TO DO IF YOU SMELL GAS**
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

Installation and service must be performed by a qualified installer, service agency or gas supplier.

**WARNING:** Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual for correct installation and operational procedures. For assistance or additional information consult a qualified installer, service agency or gas supplier.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.

**WATER VAPOR:** A by-product of unvented room heaters.

Water vapor is a by-product of gas combustion. An unvented room heater produces approximately one (1) ounce (30ml) of water for every 1,000 BTU's (.3KW's) of gas input per hour. Refer to page 3.

*Aftermarket: Completion of sale, not for purpose of resale, from the manufacturer.

Installers: Please leave these instructions with the consumer.

Consumers: Please retain these instructions for future use.
**IMPORTANT SAFETY INFORMATION**

**WARNINGS**

**IMPORTANT:** Read this owner’s manual carefully and completely before trying to assemble, operate, or service this heater. Improper use of this heater can cause serious injury or death from burns, fire, explosion, electrical shock, and carbon monoxide poisoning.

**WARNING:** Do not use any accessory not approved for use with this heater.

**WARNING:** Any change to this heater or its controls can be dangerous.

Do not place clothing or other flammable material on or near the appliance. Never place any objects on the heater.

Due to high temperatures, heater should be kept out of traffic and away from furniture and draperies.

Surface of heater becomes very hot when running heater. Keep children and adults away from hot surface to avoid burns or clothing ignition. Heater will remain hot for a time after shut down. Allow surface to cool before touching.

Carefully supervise young children when they are in the same room with heater.

Make sure grill guard is in place before running the heater.

Keep the appliance area clear and free from combustible materials, gasoline, and other flammable vapors and liquids.

1. This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.
2. Do not place propane/LP supply tank(s) inside any structure. Locate propane/LP supply tank(s) outside.
3. If you smell gas
   - Shut off gas supply.
   - Do not try to light any appliance.
   - Do not touch any electrical switch; do not use any phone in your building.
   - Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
   - If you cannot reach your gas supplier, call the fire department.
4. Always run heater with control knob at LOW or HIGH locked positions. Never set control knob between locked positions. Poor combustion and higher levels of carbon monoxide may result.
5. This heater needs fresh, outside air ventilation to run properly. This heater has an Oxygen Depletion Sensor (ODS) safety shutoff system. The ODS shuts down the heater if not enough fresh air is available. See Fresh Air for Combustion and Ventilation pages 4 and 5.
6. Keep all air openings in front and bottom of heater clear and free of debris. This will insure enough air for proper combustion.
7. If heater shuts off. Do not relight until you provide fresh, outside air. If heater keeps shutting off, have it serviced.
8. Do not operate heater
   - where flammable liquids or vapors are used or stored
   - under dusty conditions
9. Do not install models HR10ML and HR10TL in a bathroom.
10. Before using furniture polish, wax, carpet cleaner, or similar products, turn heater off. If heated, the vapors from these products may create a white powder residue within burner box or on adjacent walls or furniture.
11. Do not use heater if any part has been under water. Immediately call a qualified service technician to inspect the room heater and to replace any part of the control system and any gas control which has been under water.
12. Turn off heater and let cool before servicing. Only a qualified service person should service and repair heater.
13. Operating heater above elevations of 4,500 feet could cause pilot outage.
14. To prevent performance, problems, do not use propane/LP fuel tank of less than 100 lbs. capacity.

**DANGER:** Carbon monoxide poisoning may lead to death!

Carbon Monoxide Poisoning:

Early signs of carbon monoxide poisoning resemble the flu with headaches, dizziness, or nausea. If you have these signs, the heater may not be working properly. **Get fresh air at once!** Have heater serviced. Some people are more affected by carbon monoxide than others. These include pregnant women, persons with heart or lung disease or anemia, those under the influence of alcohol, and those at high altitudes.

**Propane/LP Gas:** Propane/LP gas is odorless. An odor-making agent is added to Propane/LP gas. The odor helps you detect a Propane/LP gas leak. However, the odor added to Propane/LP gas can fade. Propane/LP gas may be present even though no odor exists. Make certain you read and understand all warnings. Keep this manual for reference. It is your guide to safe and proper operation of this heater.
PRODUCT IDENTIFICATION

SAFETY DEVICE
A standard requirement for all vent-free room heaters. This heater has a pilot with an Oxygen Depletion Sensor (ODS) safety shutoff system. The ODS/pilot shuts off the heater if there is not enough fresh air.

PIEZO IGNITION SYSTEM
This heater is equipped with a piezo ignitor. This system requires no matches, batteries, or other sources to light heater.

THERMOSTATIC HEAT CONTROL ON THERMOSTAT MODELS
These heaters have a control valve with a thermostat sensing bulb. This results in the greatest heater comfort and may result in lower gas bills.

LOCAL CODES
Install and use heater with care. Follow all local codes. In the absence of local codes, use the latest edition of *National Fuel Gas Code ANSIZ223.1*, also known as NFPA 54*.

*Available from :
- American National Standards Institute, Inc.
  1430 Broadway
  New York, NY 10018
- National Fire Protection Association, Inc.
  Batterymarch Park
  Quincy, MA 02269

QUALIFIED INSTALLING AGENCY
Installation and replacement of gas piping, gas utilization equipment or accessories and repair and servicing of equipment shall be performed only by a qualified agency. The term "qualified agency" means any individual, firm, corporation, or company that either in person or through a representative is engaged in and is responsible for (a) the installation, testing, or replacement of gas piping or (b) the connection, installation, testing, repair, or servicing of equipment; that is experienced in such work; that is familiar with all precautions required, and that has complied with all the requirements of the authority having jurisdiction.

State of Massachusetts: The installation must be made by a licensed plumber or gas fitter in the Commonwealth of Massachusetts. Sellers of unvented propane or natural gas-fired supplemental room heaters shall provide to each purchaser a copy of 527 CMR 30 upon sale of the unit. In the state of Massachusetts, unvented propane or nature gas-fired space heaters shall be prohibited in bedrooms and bathrooms.

UNPACKING
1. Remove heater from carton.
2. Remove all protective packaging applied to heater for shipment.
3. Check heater for any shipping damage. If heater is damaged, promptly inform dealer where you bought heater.

WATER VAPOR: A BY-PRODUCT OF UNVENTED ROOM HEATERS
Water vapor is a by-product of gas combustion. An unvented room heater produces approximately one (1) ounce (30ml) of water for every 1,000 BTU’s (3KW’s) of gas input per hour.
Unvented room heaters are recommended as supplemental heat (a room) rather than a primary heat source (an entire house). In most supplemental heat application, the water vapor does not create a problem. In most applications, the water vapor enhances the low humidity atmosphere experienced during cold weather.

The following steps will help insure that water vapor does not become a problem.
1. Be sure the heater is sized properly for the application, including ample combustion air and circulation air.
2. If high humidity is experienced, a dehumidifier may be used to help lower the water vapor content of the air.
3. Do not use an unvented room heater as the primary heat source.
FRESH AIR FOR COMBUSTION AND VENTILATION

WARNING: This heater shall not be installed in a confined space or unusually tight construction unless provisions are provided for adequate combustion and ventilation air. Read the following instructions to insure proper fresh air for this and other fuel-burning appliances in your home.

PROVIDING ADEQUATE VENTILATION

The following are excerpts from National Fuel Gas Code, NFPA 54/ANS Z223.1, Section 5.3. Air for Combustion and Ventilation. All spaces in homes fall into one of the three following ventilation classifications:

1. Unusually Tight Construction
2. Unconfined Space
3. Confined Space

The information on pages 4 through 6 will help you classify your space and provide adequate ventilation.

Unusually Tight Construction

The air that leaks around doors and windows may provide enough fresh air for combustion and ventilation. However, in buildings of unusually tight construction, you must provide additional fresh air.

Unusually tight construction is defined as construction where:

a. walls and ceilings exposed to the outside atmosphere have a continuous water vapor retarder with a rating of one perm (6×10⁻¹¹ kg per pa-sec-m²) or less with openings gasketed or sealed and
b. weather stripping has been added on openable windows and doors and
c. caulking or sealants are applied to areas such as joints around window and door frames, between sole plates and floors, between wall-ceiling joints, between wall panels, at penetrations for plumbing, electrical, and gas lines, and at other openings.

If your home meets all of the three criteria above, you must provide additional fresh air. See Ventilation Air from Outdoors, pages 5 and 6.

Confined and Unconfined Space

The National Fuel Gas Code ANS Z223.1 defines a confined space as a space whose volume is less than 50 cubic feet per 1,000 Btu per hour (4.8 m³ per kw) of the aggregate input rating of all appliances installed in that space and an unconfined space as a space whose volume is not less than 50 cubic feet per 1,000 Btu per hour (4.8 m³ per kw) of the aggregate input rating of all appliances installed in that space. Rooms communicating directly with the space in which the appliances are installed*, through openings not furnished with doors, are considered a part of the unconfined space.

This heater shall not be installed in a confined space or unusually tight construction unless provisions are provided for adequate combustion and ventilation air.

* Adjoining rooms are communicating only if there are doorless passageways or ventilation grills between them.

DETERMINING FRESH-AIR FLOW FOR HEATER LOCATION

Determining if you have a Confined or Unconfined Space*

Use this worksheet to determine if you have a confined or unconfined space.

Space: Includes the room in which you will install heater plus any adjoining rooms with doorless passageways or ventilation grills between the rooms.

1. Determine the volume of the space (length×width×height).

   Length×Width×Height=________ cu.ft. (volume of space)

   Example: Space size 18ft (length)×16ft (width)×8ft. (ceiling height)=2304cu. ft. (volume of space)

   If additional ventilation to adjoining room is supplied with grills or openings, add the volume of these rooms to the total volume of the space.

2. Divide the space volume by 50 cubic feet to determine the maximum Btu/Hr the space can support.

   ________(volume of space)÷50 cu. ft.=(Maximum Btu/Hr the space can support)

   Example: 2304 cu. ft. (volume of space)÷50 cu.ft.=46.1 or 46,100(maximum Btu/Hr the space can support)

WARNING: If the area in which the heater may be operated is smaller than that defined as an unconfined space or if the building is of unusually tight construction, provide adequate combustion and ventilation air by one of the methods described in the National Fuel Gas Code, ANS Z223.1, Section 5.3 or applicable local codes.

4
3. Add the Btu/Hr of all fuel burning appliances in the space.

<table>
<thead>
<tr>
<th>Appliance Type</th>
<th>Btu/Hr</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vent-free heater</td>
<td></td>
</tr>
<tr>
<td>Gas water heater*</td>
<td></td>
</tr>
<tr>
<td>Gas furnace</td>
<td></td>
</tr>
<tr>
<td>Vented gas heater</td>
<td></td>
</tr>
<tr>
<td>Gas Fireplace logs</td>
<td></td>
</tr>
<tr>
<td>Other gas appliances*</td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td></td>
</tr>
</tbody>
</table>

Example:
- Gas water heater: 40,000 Btu/Hr
- Vent free heater: +10,000 Btu/Hr
- Total: 50,000 Btu/Hr

*Do not include direct-vent gas appliances. Direct-vent draws combustion air from the outdoors and vents to the outdoors.

4. Compare the maximum Btu/Hr the space can support with the actual amount of Btu/Hr used.

\[
\text{Maximum Btu/Hr can support} - \text{Actual Btu/Hr used}
\]

Example: 46,100 Btu/Hr (maximum the space can support)
50,000 Btu/Hr (actual amount of Btu/Hr used)

The space in the above example is a confined space because the actual Btu/Hr used is more than the maximum Btu/Hr the space can support.

You must provide additional fresh air. Your options are as follows:

A. Rework worksheet, adding the space of an adjoining room. If the extra space provides an unconfined space, remove door to adjoining room or add ventilation grills between rooms. See Ventilation Air From inside Building, page 5.

B. Vent room directly to the outdoors. See Ventilation Air From Outdoors, page 6.

C. Install a lower Btu/Hr heater, if lower Btu/Hr size makes room unconfined.

If the actual Btu/Hr used is less than the maximum Btu/Hr the space can support, the space is an unconfined space. You will need no additional fresh air ventilation.

AIR FOR COMBUSTION AND VENTILATION

Continued

VENTILATION AIR

Ventilation Air From Inside Building

This fresh air would come from an adjoining unconfined space. When ventilating to an adjoining unconfined space, you must provide two permanent openings: one within 12" of the ceiling and one within 12" of the floor on the wall connecting the two spaces (see options 1 and 2, Figure 2). You can also remove door into adjoining room (see option 3, Figure 2). Follow the National Fuel Gas Code NFPA 54/ANS Z223.1, Section 5.3, Air for Combustion and Ventilation for required size of ventilation grills or ducts.

⚠️ WARNING: Rework worksheet, adding the space of the adjoining unconfined space. The combined spaces must have enough fresh air to supply all appliances in both spaces.
VENTILATION AIR

**Ventilation Air From Outdoors**

Provide extra fresh air by using ventilation grills or ducts. You must provide two permanent openings: one within 12” of the ceiling and one within 12” of the floor.

Connect these items directly to the outdoors or spaces open to the outdoors. These spaces include attics and crawl spaces. Follow the National Fuel Gas Code NFPA 54/ANS Z223.1, Section 5.3, Air for Combustion and Ventilation for required size of ventilation grills or ducts.

**IMPORTANT:** Do not provide openings for inlet or outlet air into attic if attic has a thermostat-controlled power vent. Heated air entering the attic will activate the power vent.

---

**INSTALLATION**

**NOTICE:** This heater is intended for use as supplemental heat. Use this heater along with your primary heating system. Do not install this heater as your primary heat source. If you have a central heating system, you may run system’s circulating blower while using heater. This will help circulate the heat throughout the house. In the event of a power outage, you can use this heater as your primary heat source.

**WARNING:** A qualified service person must install heater. Follow all local codes.

**CHECK GAS TYPE**

Use only Propane/LP gas. If your gas supply is not Propane/LP, do not install heater. Call dealer where you bought heater for proper type heater.

**INSTALLATION NEEDS**

Before installing heater, make sure you have the items listed below.
- piping (check local codes)
- sealant (resistant to Propane/LP gas)
- equipment shutoff valve*
- ground joint union
- test gauge connection*
- sediment trap
- tee joint
- pipe wrench

*A CSA/AGA design-certified equipment shutoff valve with 1/8” NPT tap is an acceptable alternative to test gauge connection. Purchase the optional CSA/AGA design certified equipment shutoff valve from your dealer.

**LOCATING HEATER**

This heater is designed to be mounted on a wall. For convenience and efficiency, install heater
- where there is easy access for operation, inspection, and service
- in coldest part of room

**WARNING:** Never install the heater
- in a bathroom (Models HR10ML and HR10TL, only HR06ML is allowed in a bathroom. Check local codes.)
- in a recreational vehicle.
- where curtains, furniture.
- as a fireplace insert.
- in high traffic areas.
- in windy or drafty areas.

When the HR06ML is installed in bathrooms, do not use flammable products such as aerosol hair spray, foot spary or any product that contains flammable vapors and keep towels away from heater. (only HR06ML is allowed in a bathroom.)

**CAUTION:** This heater creates warm air currents. These currents move heat to wall surfaces next to heater. Installing heater next to vinyl or cloth wall coverings or operating heater where impurities (such as tobacco smoke, aromatic candles, cleaning fluids, oil or kerosene lamps, etc.) in the air exist may discolor walls.
**INSTALLATION**

**WARNING:** Maintain the minimum clearances shown in Figure 4. If you can, provide greater clearances from floor, ceiling, and joining wall.

**Figure 4 - Mounting clearances As Viewed From Front of Heater**

**Removing Lower Front Panel Of Heater**
1. Remove two Screws near bottom corners of lower front panel.
2. Pull bottom of lower front panel forward, then down (see Figure 6).

**Figure 6 - Removing Lower Front Panel Of Heater**

**Methods For Attaching Mounting Bracket To Wall**
Only use last hole on each end of mounting bracket to attach bracket to wall. Attach mounting bracket to wall only in one of two ways:
1. Attaching to wall stud
2. Attaching to wall anchor

**Attaching to Wall Stud:** This method provides the strongest hold. Insert mounting screws through mounting bracket and into wall studs.

**Attaching to Wall Anchor:** This method allows you to attach mounting bracket to hollow walls (wall areas between studs) or to solid walls (concrete or masonry).

Decide which method better suits your needs. Either method will provide a secure hold for the mounting bracket.

**Marking Screw Locations**
1. Tape mounting bracket to wall where heater will be located. Make sure mounting bracket is level.

**WARNING:** Maintain minimum clearances shown in Figure 4. If you can, provide greater clearances from floor and joining wall.

2. Mark screw locations on wall (see Figure 7)

**Note:** Only mark last hole on each end of mounting bracket. Insert mounting screws through these holes only.

3. Remove tape and mounting bracket from wall.

**Figure 5 - Mounting Bracket Location**

**Figure 7 - Mounting Bracket Clearances**
INSTALLATION

Attaching Mounting Bracket To Wall

*Note:* Wall anchors, mounting screws, and spacers are in hardware package. The hardware package is provided with heater.

**Attaching to Wall Stud Method**

*For attaching mounting bracket to wall studs*

1. Drill holes at marked locations using 9/64” drill bit.
2. Place mounting bracket onto wall. Line up last hole on each end of bracket with holes drilled in wall.
3. Insert mounting screws through bracket and into wall studs.
4. Tighten screws until mounting bracket is firmly fastened to wall.

**Attaching to Wall Anchor Method**

*For attaching mounting bracket to hollow walls (wall areas between studs) or solid walls (concrete or masonry)*

1. Drill holes at marked locations using 5/16” drill bit. For solid walls (concrete or masonry), drill at least 1” deep.
2. Fold wall anchor as shown in Figure 8 below.
3. Insert wall anchor (wings first) into hole. Tap anchor flush to wall.
4. For thin walls (1/2” or less), insert red key into wall anchor. Push red key to "pop" open anchor wings (see Figure 9).

**IMPORTANT:** Do not hammer key! For thick walls (over 1/2” thick) or solid walls, do not pop open wings.

**Placing Heater On Mounting Bracket**

1. Locate two horizontal slots on back panel of heater (see Figure 10).
2. Place heater onto mounting bracket. Slide horizontal slots onto stand-out tabs on mounting bracket.

**Installing Bottom Mounting Screw**

1. Locate bottom mounting hole. This hole is near bottom on back panel of heater (see Figure 11).
2. Mark screw location on wall.
3. Remove heater from mounting bracket.
4. If installing bottom mounting screw into hollow or solid wall, install wall anchors. Follow steps 1 through 4 under Attaching To Wall Anchor Method. If installing bottom mounting screw into wall stud, drill holes at marked locations using 9/64” drill bit.
5. Replace heater onto mounting bracket.
6. Place spacers between bottom mounting holes and wall anchor or drilled holes.
7. Hold spacer in place with one hand. With other hand, insert mounting screw through bottom mounting hole and spacer. Place tip of screw in opening of wall anchor or drilled holes.
8. Tighten both screw until heater is firmly secured to wall. Do not over tighten.

*Note:* Do not replace lower front panel at this time. Replace lower front panel after making gas connections and checking for leaks (see page 9).
CONNECTING TO GAS SUPPLY

**WARNING:** A qualified service person must connect heater to gas supply. Follow all local codes.

**WARNING:** This appliance requires a 3/8" NPT (National Pipe Thread) inlet connection to the pressure regulator.

**CAUTION:** Never connect heater directly to the propane/LP supply. This heater requires an external regulator (not supplied). Install the external regulator between the heater and propane/LP supply.

The installer must supply an external regulator. The external regulator will reduce incoming gas pressure. You must reduce incoming gas pressure to between 11 and 13 inches of water. If you do not reduce incoming gas pressure, heater regulator damage could occur. Install external regulator with the vent pointing down as shown in Figure 12. Pointing the vent down protects it from freezing rain or sleet.

**CAUTION:** Use only new, black iron or steel pipe. Internally-tinned copper tubing may be used in certain areas. Check your local codes. Use pipe of large enough diameter to allow proper gas volume to heater. If pipe is too small, undue loss of pressure will occur.

**Figure 13 - Gas Connection**

*A CSA/AGA design-certified equipment shutoff valve with 1/8" NPT tap is an acceptable alternative to test gauge connection. Purchase the optional CSA/AGA design-certified equipment shutoff valve from your dealer.*

Apply pipe joint sealant lightly to male threads. This will prevent excess sealant from going into pipe. Excess sealant in pipe could result in clogged heater valves.

**CAUTION:** Use pipe joint sealant that is resistant to liquid petroleum (LP) gas.

Install sediment trap in supply line as shown in Figure 13. Locate sediment trap where it is within reach for cleaning. Locate sediment trap where trapped matter is not likely to freeze. A sediment trap traps moisture and contaminants. This keeps them from going into heater controls. If sediment trap is not installed or is installed wrong, heater may not run properly.

**IMPORTANT:** Install an equipment shutoff valve in an accessible location. The equipment shutoff valve is for turning on or shutting off the gas to the appliance.

**IMPORTANT:** Hold pressure regulator with wrench when connecting it to gas piping and/or fittings.

**Typical Inlet Pipe Diameters**

All models up to 20,000 BTU’s use 3/8” or greater pipe;
All models 25,000 BTU’s and higher, use 1/2” or greater pipe.
Installation must include an equipment shutoff valve, union, and plugged 1/8" NPT tap. Locate NPT tap within reach for test gauge hook up. NPT tap must be upstream from heater (see Figure 13).

**Figure 12 - External Regulator with Vent Pointing Down**

*"..."*
Checking Gas Connections

**Warning:** Test all gas piping and connections for leaks after installing or servicing. Correct all leaks at once.

**Warning:** Never use an open flame to check for a leak. Apply a mixture of liquid soap and water to all joints. Bubbles forming show a leak. Correct all leaks at once.

**Pressure Testing Gas Supply Piping System**

**Test Pressures In Excess Of 1/2 PSIG (3.5 K Pa)**

1. Disconnect appliance with its appliance main gas valve (control valve) and equipment shutoff valve from gas supply piping system. Pressures in excess of 1/2 psig will damage heater regulator.
2. Cap off open end of gas pipe where equipment shutoff valve was connected.
3. Pressurize supply piping system by either using compressed air or opening propane/LP supply tank valve.
4. Check all joints of gas supply piping system. Apply mixture of liquid soap and water to gas joints. Bubbles forming show a leak.
5. Correct all leaks at once.
6. Reconnect heater and equipment shutoff valve to gas supply. Check reconnected fittings for leaks.

**Test Pressures Equal To or Less Than 1/2 PSIG (3.5 K Pa)**

1. Close equipment shutoff valve (see Figure 14).
2. Pressurize supply piping system by either using compressed air or opening propane/LP supply tank valve.
3. Check all joints from propane/LP supply tank to equipment shutoff valve (see Figure 14). Apply mixture of liquid soap and water to gas joints. Bubbles forming show a leak.
4. Correct all leaks at once.

Operating Your Heater

**Warning:** If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. When lighting the pilot, follow these instructions exactly.
B. **Before Lighting** smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

**What To Do If You Smell Gas**

- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified service technician or gas supplier. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

In the State of Massachusetts the gas cock must be a T handle type. The State of Massachusetts requires that a flexible appliance connector cannot exceed three feet in length.
OPERATING YOUR HEATER

Manual Control Models: HR06ML HR10ML

LIGHTING INSTRUCTIONS

1. STOP! Read the safety information on the side of heater.
2. Check that gas supply to heater is on.
3. Push in gas control knob slightly and turn clockwise to the OFF position. (see Figures 16 & 17)
4. Wait five (5) minutes to clear out any air. Then smell for gas, including near the floor. If you smell gas, STOP! Follow “B” in the safety information on the side of the heater. If you do not smell gas, go to the next step.
5. Push in gas control knob slightly and turn counterclockwise to “PILOT/IGN” and depress for five (5) seconds.

NOTE: The first time that the heater is operated after connecting the gas supply, the control knob should be depressed for about thirty (30) seconds. This will allow air to bleed from the gas system.
6. With control knob pressed in, push down and release the ignitor button. This will light pilot. If needed, keep pressing ignitor button until pilot lights.
7. Keep control knob depressed for ten (10) seconds after lighting pilot. If pilot goes out, repeat steps 5, 6 and 7.
8. To select the desired heating level, partially press down the control knob slightly and rotate counterclockwise. Release the downward pressure on the knob while continuing to turn until the knob locks at the desired setting position. Do not operate between locked positions.

WARNING: When running heater, set control knob at ON, LOW or HIGH locked positions. Never set control knob between locked positions. Poor combustion and higher levels of carbon monoxide may result.

CAUTION: Do not try to adjust heating levels by using the equipment shutoff valve.

Slightly press in control knob and turn counterclockwise to the ON, LOW or HIGH positions (see Figure 19 & 20).

IMPORTANT: Release downward pressure while turning control knob. Control knob will lock at the desired position.

TO TURN OFF GAS TO APPLIANCE

Shutting Off Heater
1. Turn control knob clockwise to the OFF position.
2. Turn off all electric power to the appliance if service is to be performed.

Shutting Off Burner Only (Pilot Stays Lit)
Turn control knob clockwise to the PILOT/IGN position.

MANUAL LIGHTING PROCEDURE

1. Remove lower front panel (see Figure 7 page 7).
2. Follow steps through 5 under Lighting Instructions.
3. With control knob pressed in, strike match. Hold match to pilot until pilot lights.
5. Replace lower front panel.
OPERATING YOUR HEATER

THERMOSTAT MODEL
HR10TL

FOR YOUR SAFETY
READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
• Do not try to light any appliance.
• Do not touch any electric switch, do not use any phone in your building.
• Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
• If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified service technician or gas supplier. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

LIGHTING INSTRUCTIONS

1. STOP! Read the safety information on the side of heater.
2. Make sure equipment shut off valve is fully open.
3. Turn control knob clockwise to the OFF position.

4. Wait five(5) minutes to clear out any gas. Then smell for gas, including near the floor. If you smell gas, STOP! Follow “B” in the safety information on the side of heater. If you don’t smell gas, go to the next step.

5. Turn control knob counterclockwise to the PILOT position. Press in control knob for five(5) seconds. (see Figure 21).

Note: You may be running this heater for the first time after hooking up to gas supply. If so, the control knob may need to be pressed in for 30 seconds. This will allow air to bleed from the gas system.

• If control knob does not pop up when released, contact a qualified service person or gas supplier for repairs.

6. With control knob pressed in, push down and release ignitor button. This will light pilot. The pilot is attached to the front of burner. If needed, keep pressing ignitor button until pilot lights.

Note: If pilot does not stay lit, refer to Troubleshooting, pages 14 through 16. Also contact a qualified service person or gas supplier for repairs. Until repairs are made, light pilot with match. To light pilot with match, see Manual Lighting Procedure.

• If control knob does not pop up when released, contact a qualified service person or gas supplier for repairs.

Note: If pilot goes out, repeat steps 3 through 7. This heater has a safety interlock system. Wait one(1) minute before lighting pilot again.

8. Turn control knob counter clockwise to desired seating level. The main burner should light. Set control knob to any heat level between HI and LO. (see Figure 23)

CAUTION: Do not try to adjust heating levels by using the equipment shut off valve.

Figure 21 - Control Knob In The OFF Position (HR10TL)

Figure 22 - Pilot

Figure 23 - Burner Patterns

THERMOSTAT CONTROL OPERATION
The thermostatic control used on this model differs from standard thermostats. Standard thermostats simply turn on and off the burner. The thermostat used on this heater senses the room temperature. At times the room may exceed the set temperature. If so, the burner will shut off. The burner will cycle back on when room temperature drops below the set temperature. The control knob can be set to any comfort level between HI and LO.

Note: The thermostat sensing bulb measures the temperature of air near the heater cabinet. This may not always agree with room temperature (depending on housing construction, installation location, room size, open air temperatures, etc.) Frequent use of your heater will let you determine your own comfort levels.

TO TURN OFF GAS TO APPLIANCE

Shutting Off Heater
1. Turn control knob clockwise to the OFF position.
2. Turn off all electric power to the appliance if service is to be performed.

Shutting Off Burner Only (pilot stays lit)
Turn control knob clockwise to the PILOT position.
OPERATING HEATER

Continued

■ MANUAL LIGHTING PROCEDURE ■

1. Remove lower front panel (see Figure 7 page 7).
2. Follow steps 1 through 5 under Lighting Instructions on page 12.
3. With control knob pressed in, strike match. Hold match to pilot until pilot lights.
5. Replace lower front panel.

INSPECTING BURNER

Check pilot flame pattern and burner flame pattern often.

PILOT FLAME PATTERN

Figure 24 shows a correct pilot flame pattern. Figure 25 shows an incorrect pilot flame pattern. The incorrect pilot flame is not touching thermocouple. This will cause the thermocouple to cool. When the thermocouple cools, the heater will shut down. If pilot flame pattern is incorrect, as shown in Figure 25,
- turn heater off (see To Turn Off Gas to Appliance pages 11 & 12)
- see Troubleshooting (pages 14 through 16)

![Figure 24 - Correct Pilot Flame Pattern](image1)

![Figure 25 - Incorrect Pilot Flame Pattern](image2)

BURNER FLAME PATTERN

Figure 26 shows a correct burner flame pattern. Figure 27 shows an incorrect burner flame pattern.

If burner flame pattern is incorrect, as shown in Figure 27
- turn heater off (see To Turn Off Gas to Appliance pages 11 & 12)
- see Troubleshooting (pages 14 through 16)

![Figure 26 - Correct Burner Flame Pattern](image3)

![Figure 27 - Incorrect Burner Flame Pattern](image4)

CLEANING AND MAINTENANCE

⚠️ WARNING: turn off heater and let cool before cleaning.

⚠️ CAUTION: you must keep control areas, burner, and circulating air passageways of heater clean. Inspect these areas of heater before each use. Have heater inspected yearly by a qualified service person. Heater may need more frequent cleaning due to excessive lint from carpeting, bedding material, pet hair, etc.

![Figure 28 - Pilot Air Inlet Hole](image5)

CABINET

Air Passageways
- Use a vacuum cleaner or pressurized air to clean.

Exterior
- Use a soft cloth dampened with a mild soap and water mixture. Wipe the cabinet to remove dust.
## TROUBLESHOOTING

**Note:** All troubleshooting items are listed in order of operation.

**WARNING:** Only a qualified service person should service and repair heater.

**CAUTION:** Never use a wire, needle, or similar object to clean ODS/pilot. This can damage ODS/pilot unit.

<table>
<thead>
<tr>
<th>OBSERVED PROBLEM</th>
<th>POSSIBLE CAUSE</th>
<th>REMEDY</th>
</tr>
</thead>
</table>
| When ignitor button is pressed and control knob is pressed in and turned to the PILOT position, there is no spark at ODS/pilot. | 1. Ignitor electrode is positioned wrong.  
2. Ignitor electrode is broken.  
3. Ignitor electrode is not connected to ignitor cable.  
4. Ignitor cable is pinched or wet.  
5. Broken ignitor cable.  
2. Replace ignitor.  
3. Reconnect ignitor cable.  
4. Free ignitor cable if pinched by any metal or tubing. Keep ignitor cable dry.  
5. Replace ignitor cable.  
6. Replace piezo ignitor. |
| When ignitor button is pressed and control knob is pressed in and turned to the PILOT position, there is a spark at ODS/pilot but no ignition. | 1. Gas supply turned off or equipment shutoff valve is closed.  
2. Control knob not fully pressed in while pressing ignitor button.  
3. Air in gas lines when installed.  
4. ODS/pilot is clogged.  
5. Control knob not in PILOT position.  
6. Gas regulator setting is not correct.  
7. Depleted gas supply. | 1. Turn on gas supply or open equipment shutoff valve.  
2. Fully press in control knob while pressing ignitor button.  
3. Continue holding down control knob. Repeat igniting operation until air is removed.  
4. Clean ODS/pilot (see Cleaning and Maintenance, Page 13) or replace ODS/pilot assembly.  
5. Turn control knob to PILOT position.  
6. Replace gas regulator.  
7. Contact local propane/LP gas company. |
| ODS/pilot lights but flame goes out when control knob is released. | 1. Control knob is not fully pressed in.  
2. Control knob is not pressed in long enough.  
3. Equipment shutoff valve is not fully open.  
4. Thermocouple connection loose at control valve.  
5. Thermocouple damaged.  
2. After ODS/pilot lights, keep control knob pressed in 30 seconds.  
3. Fully open equipment shutoff valve.  
4. Hand tighten until snug, then tighten 1/4 turn more.  
5. Replace thermocouple.  
6. Replace control valve. |

# TROUBLESHOOTING

## Continued

**WARNING:**
- If you smell gas:
  - Shut off gas supply.
  - Do not try to light any appliance.
  - Do not touch any electrical switch; do not use any phone in your building.
  - Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

**IMPORTANT:** Operating heater where impurities in air exist may create odors. Cleaning supplies, paint, paint remover, cigarette smoke, cements and glues, new carpet or textiles, etc., create fumes. These fumes may mix with combustion air and create odors.

<table>
<thead>
<tr>
<th>OBSERVED PROBLEM</th>
<th>POSSIBLE CAUSE</th>
<th>REMEDY</th>
</tr>
</thead>
</table>
| Heater produces unwanted odors. | 1. Heater is burning vapors from paint, hair spray, glues, etc. (See IMPORTANT statement above).  
2. Gas leak. See Warning Statement at top of page.  
3. Low fuel supply. | 1. Ventilate room. Stop using odor causing products while heater is running.  
2. Locate and correct all leaks(see Checking Gas Connections, page 10).  
3. Refill supply tank. |
| Heater shuts off in use (ODS operates). | 1. Not enough fresh air is available.  
2. Low line pressure.  
3. ODS/pilot is partially clogged | 1. Open window and/or door for ventilation.  
2. Contact local propane/LP gas company.  
3. Clean ODS/pilot (see Cleaning page 13). |
| Gas odor exists even when control knob is in OFF position. | 1. Gas leak. See Warning Statement at top of page.  
2. Control valve defective. | 1. Locate and correct all leaks(see Checking Gas Connections, page 10).  
2. Replace control valve. |
| Gas odor during combustion. | 1. Foreign matter between control valve and burner.  
2. Gas leak. See Warning Statement at top of page. | 1. Take apart gas tubing and remove foreign matter.  
2. Locate and correct all leaks (see Checking Gas Connections, page 10). |

**Note:** Dimensions listed are outer most points on the heater (includes control knobs and grill).

### REPLACEMENT PARTS

**Note:** Use only original replacement parts. This will protect your warranty coverage for parts replaced under warranty.

### PARTS UNDER WARRANTY

Contact authorized dealer from whom you purchased this product. If they are unable to supply original replacement part(s), call the number on the front of this manual. When contacting your dealer or HearthRite, have ready:
- your name
- your address
- model and serial numbers of your heater
- how heater was malfunctioning
- type of gas used (propane/LP or natural gas)
- purchase date
- warranty card

Usually, we will ask you to return the defective part to the factory.

### SERVICE HINTS

**When Gas Pressure Is Too Low**
- Pilot will not stay lit
- Burner will have delayed ignition
- Heater will not produce specified heat

### ACCESSORIES

Purchase these heater accessories from your local dealer. If they cannot supply these accessories, contact HearthRite for information. You can also write to the address listed on the front of this manual.

### FLOOR MOUNTING STAND

For locating heater on the floor, away from a wall. Complete installation instructions provided with floor mounting stand.

WARRANTY INFORMATION
KEEP THIS WARRANTY

SERIAL NUMBER
LABEL

Always specify model and serial numbers when communicating with the factory.

We reserve the right to amend these specifications at any time without notice. The only warranty applicable is our standard written warranty. We make no other warranty, expressed or implied.

LIMITED WARRANTY HEARTHRITE VENT-FREE GAS SPACE HEATERS

HearthRite warrants this product to be free from defects in materials, components and limited labor for (3) three years from the date of first purchase, provided that the product has been properly installed, operated and maintained in accordance with all applicable instructions. To make certain under this warranty, the Bill of Sale or cancelled check must be presented.

This warranty is extended only to the original retail purchaser. This warranty covers the cost of part(s) required to restore this heater to proper operating condition and an allowance for labor when provided by a HearthRite Authorized Service Center. Warranty part(s) MUST be obtained through authorized dealers of this product and/or HearthRite who will provide original factory replacement parts. Failure to use original factory replacement parts voids this warranty. The heater MUST be installed by a qualified installer in accordance with all local codes and instructions furnished with the unit.

This warranty does not apply to parts that are not in original condition because of normal wear and tear or parts that fail or become damaged as a result of misuse, accidents, lack of proper maintenance or defects caused by improper installation.

Some States do not allow a limitation on how long an implied warranty lasts or an exclusion or limitation of incidental or consequential damages, so the above limitation on implied warranties, or exclusion or limitation on damages may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights that vary from state to state. For information about this warranty, please write to:
